

CLAIMS:

1. In connection with a process of preparing an air bag by laying a pair of base fabric pieces impregnated and/or coated with silicone rubber one on the other, with the impregnated or coated surfaces of the pieces inside, and joining peripheral portions of the pieces together to form a bag,  
an addition curable silicone rubber composition for use as a sealer to be applied to the peripheral portions of the base fabric pieces, the composition comprising an aluminum hydroxide powder and curing into a silicone rubber having an elongation at break of at least 1000%.
2. The composition of claim 1, wherein the aluminum hydroxide powder is untreated or surface treated with an agent selected from the group consisting of fatty acids, resin acids, organosilazanes and alkoxysilanes.
3. The composition of claim 1, wherein the aluminum hydroxide powder has an average particle size of 0.01 to 50  $\mu\text{m}$ .
4. The composition of claim 1, wherein the addition curable silicone rubber composition comprises
  - (i) an organopolysiloxane containing at least two alkenyl radicals in a molecule,
  - (ii) an organohydrogenpolysiloxane containing at least two silicon atom-bonded hydrogen atoms in a molecule,
  - (iii) a platinum group metal catalyst, and
  - (iv) an organopolysiloxane resin comprising alkenyl-containing siloxane units and siloxane units of the formula:  $\text{SiO}_{4/2}$  in a molecule.
5. The composition of claim 4, wherein the composition further comprises an alkoxysilane or a partial hydrolytic condensate thereof.
